

SAFE Systems, Inc. introduces Enduroguard® Cable

Strength and Flexibility for Reliable Power Delivery

Cut maintenance costs and downtime by selecting a cable that stands up to the harshest of industrial environments—including grit and grime. Increase workplace safety with a UL certified electrical cable that is flexible enough to coil, reaches inaccessible spaces by bending without breaking, and rugged enough to prevent power interruptions.

Enduroguard® cable, with its specially formulated polyurethane jacket, prevents routine breaks, cracks and excessive wear caused by abrasion. Available in numerous colors, various wire gauges and from 2 to 5 conductors, Enduroguard® cable readily replaces or extends the cords on your existing blast equipment, including deadman switches and lights.

Switch to Enduroguard® for all of your abrasive blasting equipment cable needs.
